WASTEWATER PLANT FREEZE-DRIED BACTERIA WITH ENZYME IMPLANT In A Spore State

UNITED 84

KEEP OUT OF REACH OF CHILDREN.

CAUTION

SEE SIDE PANEL FOR ADDITIONAL
PRECAUTIONARY STATEMENTS.

**NET CONTENTS:
1-LB. Water Soluble Packets**

- Increases biodegradation of organic wastes.
 - Increases digestive capacity.
 - Increases gas production.
- Reduces biochemical oxygen demand (B.O.D.).
 - Reduces suspended solids (S.S.).
- Reduces sludge volume (S.V.). • Eliminates odors.

For application on the wastewater process side.
Please contact our Technical Support Group for
assistance.

SLUDGE LAGOONS:

Supply 5 lbs. of **UNITED 84** for each acre (6 kg for each hectare) of lagoon surface as a purge dose. This dose is based on an average depth of 5 feet (about 2 m) in the lagoon. Adjust your dosage if the depth significantly varies from 5 feet (about 2 m).

EXAMPLE: If the lagoon is 7.5 feet in depth, multiply the dose rate by 1.5. **UNITED 84** should be introduced to the lagoon by "planting" the water soluble packets around the trouble areas and/or directly in the influent stream.

MAINTENANCE DOSE: Use 10% of the purge dose per month in a non-discharging lagoon, and 20% of the purge dose per month for a discharging lagoon. Always reseed a lagoon with the purge dose if there has been a significant bacteria kill. Spring and fall "up-turns" may be reversed by the addition of **UNITED 84** at the maintenance dose rate of a discharging lagoon. In an anaerobic lagoon, significant sludge reduction can be accomplished in a period of six months to a year by following the purge and maintenance dose directions above. It would not be unusual to reduce the sludge layer by 50% in one year's time, providing there is no bacteria kill during that period of time.

LIFT STATIONS:

Use 1 lb. of **UNITED 84** for each 500 gallons (1 kg for each 4,000 liters) of capacity of the station at the low flow point, for reducing a large sludge deposit at the bottom of the well.

MAINTENANCE DOSE: 20% of the purge dose per month. If a continuous feed of bacteria with enzymes is desired, contact United Technical Support for recommendations.

SEPTIC SYSTEMS:

Use 1 lb. of **UNITED 84** for each 500 gallons (1 kg for each 4,000 liters) of capacity purge dose. If the drain field is clogged with grease, use **UNITED 556 ZYME-TREAT**, 6 gallons (approximately 25 liters) per each splitter box.

MAINTENANCE DOSE: Use 10% of the purge dose of **UNITED 84** per month. No additional **ZYME-TREAT** is needed unless the field clogs again.

RESEEDING ACTIVATED SLUDGE PLANTS:

Use 1 lb. of **UNITED 84** per 10,000 gallons (1 kg per 85,000 liters) of mixed liquor. An improvement in bacteria count should be noticed in 5 - 10 days.

ANAEROBIC SLUDGE DIGESTERS:

Use 1 lb. of **UNITED 84** for each 10,000 - 20,000 gallons (1 kg for each 85,000 to 170,000 liters) of digester contents for an initial dose.

MAINTENANCE DOSE: Use 10% of purge dose each week until no longer needed. This can be determined by checking the bacteria count in the lab.

COMPOST HEAPS: Use 1 lb. of **UNITED 84** per 5 to 10 tons, or 2 lbs. per 1,000 ft.² surface area material to be composted. Treat by mixing with water and spraying compost heap. For fastest decomposition, turn over pile every few weeks and treat with digestant.

SWAMPY AREAS: UNITED 84 may be used to clean up swamps and reduce odors by mixing 100 gallons of water per each pound of **UNITED 84** and spraying it over the swamp area. Turbulence in the swamp waters will help speed up the action of **UNITED 84**.

CAUTION:

Store in a cool, dry place. Keep container closed. Wash hands thoroughly after using. Avoid breathing dusts.
