LABORATORIES

UNITED STRUVOUT prevents deposits of struvite from building up in lines within the treatment plant.

UNITED STRUVOUT:

- Reduces and prevents plugging of lines, pumps and other equipment.
- Eliminates flow reduction due to struvite buildup in lines.
- Reduces down time.
- Reduces replacement of sludge dewatering lines and filtrate return lines.
- Eliminates pipe damage caused by scouring effect of breakaway deposits.
- Effective in reducing struvite generated from anaerobic digester functions.

UNITED STRUVOUT can be automatically fed into the treatment system utilizing dosing equipment. Typical dosage rates running from 15 – 50 mg/L of flow will fit most situations, but there can be wide variances. Work with your United Representative to determine which dosing systems and which dosages will work best.

Regular dosing will control struvite buildup.
